

ERIS

IN

SYNASTRY

BY KLAUDIO ZIC

Eris and *Eris*

Copyright © 2006 by Klaudio Zic, all rights reserved. <http://www.lulu.com/astrology>

Why did we find 2003 UB313 to be honest even in the 7th house of the horoscope? One year ago in August 2005 Eris was designated as 2003 UB313. It had no name but “Xena”, a nickname. We based our research on the object itself instead on names and nicknames.

Eris

Why there is a good side to Eris? Because there are two of them! One is the “good one” and daughter of the goddess Nyx. We could call it the spirit of capitalism. She stirs to action. People eagerly compare their results with the neighbor and are stirred by ambition. This Eris is competitive. The golden apple challenge reincarnates in capitalism as well as beauty industry. No wonder many a passage about 2003 UB313 was about real estate, beauty and competitiveness!

Eris

The other *Eris* is about war and strife. One is not satisfied with one’s own victory but wants to see one’s enemy debased and totally destroyed. People who bombed house by house only years ago in order to exterminate the enemy function as prime ministers.

Eris and *Eris* are about healthy competition or debasement to animal instinct. We are often worse than any animal since the other *Eris* kills for sheer pleasure. A good example of *Eris* in action is the WTC horoscope. *Eris* is exactly on the western horizon meaning it was setting at the time of the impact. The event was documented in detail in several publications. What strikes us is that ***Eris*** is associated with the golden apple that brought strife and division much as New York is called the Big Apple. If this is a coincidence then it is nevertheless a rare one.

In wishing you a self-fulfilling research on the meaning of Eris in your horoscope we invite you to download many free resources on 2003 UB313 that accumulated during one year of intensive study. 5 GB of material in PDF format is quite a lovely resource for all.

Eris at the Big Apple

Copyright © 2006 by Klaudio Zic, all rights reserved. <http://www.lulu.com/astrology>

Το Μήλο της Έριδας

Eris is the largest dwarf planet. This distant object is even larger than Pluto is. Eris “visited” New York at the time when the WTC impact happened. The event surely brought discord all over the planet. At the time we were mostly predicting at the basis of a Varuna Jupiter aspect since Eris was not discovered yet. Then Mars got near our planet as it never was in 50 000 years precisely in the year Eris received its designation as 2003 UB313. There is more “coincidence” to come, so sit back and forget what you know about astrology.

Eris was exactly on the western horizon of the event as if throwing the big apple of Discordia at the planet. Eris has been discovered in Cetus constellation. This large zodiacal constellation of the leviathan provoked the death of the pope and London bombing with Venus and Mars in Cetus back in 2005. Another major transneptunian is now moving from Cetus to Taurus. Its name is Sedna.

The Moon entered Orion precisely at the time of the impact. It is peculiar that Usama bin Liden has Moon in Orion. This position is not very common; in fact it is somehow exceptional. Whole generations have e.g. Saturn in Orion but Moon in Orion is a rare event. Orion is of course as much a zodiacal constellation as Cetus.

Since the advent of the WTC with Moon in Orion we became wary of the twin accursed stars below the Stargate, namely X1 and X2 Orionis. Our predictions for the war as started with the entry of Venus in Orion in summer 2006 thus alas came true in detail.

We marveled at the paradox of 1992 QB1 being exactly at the tropical descendant of the WTC map with Eris on the astronomic western horizon. 1992 QB1 is of course “Smiley”, the first “cubewano” transneptunian object ever discovered back in 1992. The presence at the descendant of both the then “10th planet” and oldest veteran of the transneptunian region stroke us like a kind of omen. Things will never be the same.

***Eris Unleashed* in the 12 Houses of the Horoscope**

Copyright © 2006 by Klaudio Zic, all rights reserved. <http://www.lulu.com/astrology>

Preface to the Second Edition

Eris was to be named in a couple of days from the publication of this new adaptation for the large masses of astrologers. This extended version slightly adjusts to its mythology.

Eris is the major dwarf planet. In this version we arranged for its delineation in the 12 houses that can be used by the “old school of astrology”. Technical terms are omitted as one can accompany the text with any tropical or Vedic delineation. We can nevertheless offer a necessary information that could be useful: *Eris* is rather *far* from the ecliptic albeit slowly approaching. It is best to take its aspects lightly and in a research mood. When we speak of “conjunction” we usually mean around 15 degrees so please take this facts into account when predicting issues using *Eris* or the transneptunian dwarf planets.

The astrological resources for *Eris* abound! One is able to choose among dozens of early publications about *Eris* when it was still designated as 2003 UB313. At the time “Xena” seemed surprisingly apt as a nickname for the giant as well as mysterious object. We hope that *Eris* fits most expectations. The character of *Eris* might surprise the astrologer in its sincerity. The outspoken character makes for clear emotional skies “I am that I am” as it saves one from accumulating a lifetime of unnecessary double meanings.

The early publications about *Eris* or 2003 UB313 include the “X Zodiac” by which the path of *Eris* becomes clear. More than 43 constellations would be too much for any astrologer thus we are spared the expansion that discoveries like Pluto or *Eris* impose upon the zodiac. The standard Neptunian zodiac has 24 IAU constellations. We can safely accept this zodiac as standard. *Eris* is thus in a zodiacal position in Cetus constellation. Thousand scans show *Eris* in Cetus and as progressing through the now historical “X Zodiac”.

Astrology in the Year 2007

Astrology

What is astrology?

-  Observation
-  The system
-  Classification
-  Calculation
-  Prediction
-  Interpretation
-  Initiation

 Genuine astrology is linked to astronomical observation. The scientists have discovered the dwarf planets. Superstitious people are quite unable to point at a precise star in order to determine the e.g. ascendant. Superstitious people are bound to use PC programs as made by equally superstitious as well as greedy people who could not care less of the true position of the planets. Those unscrupulous people are often fallen scientists. Perhaps the best of them have Eridanus ascending in their natal horoscopes. Eridanus is the ascending constellation of the fallen guru and astrologer.

 The history of the solar system is a fascinating subject as we keep discovering the distant frontier along with a surprising quantity of enormous transneptunian objects. Any research triumphs in order. Our own research classified the zodiacal

constellations into a set of 24 IAU constellations that form the astronomic zodiac. A special set of IAU constellation forms the ascendant set of the time. At this epoch we have only 16 eastern ascendants. The data as given have nothing to do with presumption or superstition since all calculation was performed on authoritative astronomic software ranging from our central integrator at NASA JPL to a small set of handy PC programs like Solex, orbital simulators and planetarium software. Our system is thus able to calculate a horoscope from below the surface of an alien sea, the cockpit of a spacecraft as well as any astronomical position. Earth-based horoscopes include altitude and topographic data for an elevated level of accuracy.

- ☾ Classification follows observation. The stars and fast moving objects are classified. Many are the classes already exist within the new frame of dwarf planets or small solar system bodies. Some of the classes we use most often in astrology are the Apoheles, Earth coorbitals, centaurs, cubewano, plutino and scattered disk objects.
- ☾ Our calculations are mainly performed on the HORIZONS integrator by Jon Giorgini of NASA JPL. Precision software like Solex is based on NASA models. While an average “astrological” program and “ephemeris” spawn errors ranging from 40 to 270 degrees of arc, the software we use is completely free from flaw, being produced by and for the honest scientifically oriented public. It is with NASA software that we determine Venus in Hydra for the year 2007.
- ☾ Prediction is paramount for the businessman, the lover and midwife. The only time we have at hand can be either wasted or used in a most productive way. Excellent timing can help producing little miracles as we infiltrate our best hopes into the propitious time at hand. Drilling a hole into the matrix implies using the right times for the right things. The prediction tools tend to remain simple and efficacious like the primary direction. Among perhaps 300 types of direction we use the primary direction. This type of calculus enables everyone to predict anything in seconds as unaided by any PC, ephemeris, calculator, pen or pencil. The miracle of astrological prediction is that everyone can know everything with perfect timing in seconds. Many honest acquaintances of mine have learned to predict e.g. marriage in minutes through informal chat. Imagine what knowledge is absorbable in an hour or even in a week.
- ☾ Interpretation must be inspired to be real interpretation. It must come from the intuitive region of the heart. While our calculations tend to be exceedingly meticulous our heart must express in terms other than technical or general. We must cover a great field still unplowed in laying down the delineation from Pluto in Bootes to Moon in Auriga. Not even Sun in Ophiuchus has been sufficiently emphasised in modern astrology. Many “astrologers” don’t even know this position exists in the real sky!
- ☾ Initiation is being blessed in that one has done things not only in a mathematically correct way but also in the true spirit of a world religion. Albeit we promote future changing in the form of the real time reality rendering tools we also encourage religious tolerance in these hard days of crisis and test for all our faiths.

Astrology in the Year 2007

The long awaited year 2007 is at hand as we write this in September 2006. Why is it so important?

- ☾ Venus enters Hydra in summer 2007. This is not only the event of the year but also an event that marks our time. If we interpret Venus in Hydra as the birth of the Antichrist, the event marks a hub in our predictions about the apocalypse.
- ♃ Jupiter enters Ophiuchus. The remarkable event is scheduled for the end of 2006 as ruling over 2007. The time is propitious for the activity of a great immortal guru.
- ♇ Pluto re-enters Ophiuchus from Serpens Cauda while heading towards the negative stargate in Sagittarius. As Serpens Cauda is the ascendant of the U.S.A., at least some relief from tensions can be expected after the nuclear threat peak end of September 2006.

The main events thus feature Venus and Jupiter along with a special position for Pluto. There are of course “minor” considerations that can affect prediction in the year to come.

- ☾ Albeit distant object 2006 HW51 completes its perihelion end of September 2006, the event may as well influence further transits in the year 2007. Even if nuclear rulers don't decide attack, the position is still dangerous in terms of missile war.
- ☾ The positions of the Moon are often important as exemplified by Moon in Cetus (2005) standing for the flux of scurrying travellers in the London underground or Moon in Auriga (2006) standing for the refugees. Even this essay has its own horoscope. As accuses fly from Pakistan to Vatican and vice versa the local ascendant is precisely between Serpens and Ophiuchus meaning right on the U.S.A. ascendant and the Moon transits in Auriga at the Orion Stargate.
- ☾ Since Vatican's ascendant is Sextans we can expect worsening for the papal mission in August 2007 when Venus retrogrades from Sextans into Hydra as ruled by giant transneptunian Orcus with forthcoming real estate transneptunian 2002 AW197.
- ☾ If the foretelling of the birth of an Antichrist in summer 2007 seems exaggerated it nevertheless stresses the dark side of the Venus transit in Hydra with its imminent influence on Vatican policy as Venus crosses Sextans. The last time Venus really sojourned in Sextans was in 1967 when it spent a month and a half (sic!) in Sextans.
- ☿ A rare Mercury transit happens in November. We already published as well as republished the omens for the world and the U.S.A. a year ago. This rare transit can of course affect planetary events at large especially as concern politics and the media.
- ☿ Mercury is the prime minister of the Sun, In politics there is binary interplay between e.g. the Iranian president who is adamant as concern nuclear politics and the foreign minister who is left “open for negotiation.”

Dwarf Planets Publications - September 2006 - Editorial

Dwarf Planets

Albeit the dwarf planets are a new category we have known them since their discovery. One by one this new world of transneptunian giants entered our hearts with appropriate delineation. Our latest effort deals with the major solar system objects in the 7th house of the horoscope. If there is a large object in your 7th house it probably comes from this list:

Record #	Epoch-yr	Primary Desig	Name	H
1	1983	(undefined)	Ceres	3.34
4	1981	(undefined)	Vesta	3.20
20000	2000	2000 WR106	Varuna	3.55
28978	2000	2001 KX76	Ixion	3.41
42301	2000	2001 UR163	[...unnamed...]	3.97
50000	2000	2002 LM60	Quaoar	2.73
55565	2002	2002 AW197	[...unnamed...]	3.27
55636	2000	2002 TX300	[...unnamed...]	3.10
55637	2002	2002 UX25	[...unnamed...]	3.60
84522	2002	2002 TC302	[...unnamed...]	3.85
84922	2003	2003 VS2	[...unnamed...]	3.96
90377	2003	2003 VB12	Sedna	1.58
90482	2001	2004 DW	Orcus	2.30
90568	2001	2004 GV9	[...unnamed...]	3.68
473520	2003	2002 MS4	[...unnamed...]	3.85
494234	2003	2003 AZ84	[...unnamed...]	3.80
497176	2002	2003 EL61	[...unnamed...]	0.26
500500	2006	2003 MW12	[...unnamed...]	3.80
513225	2003	2003 UB313	Eris	-1.17
554305	2004	2005 FY9	[...unnamed...]	-0.30
565693	2006	2005 RN43	[...unnamed...]	3.80

The list looks dreadfully “scientific” but when names are assigned to objects such lists become cozy indeed. And here’s the good news. *We delineated all of these objects* in the 7th house of your horoscope. One day soon these objects shall be appropriately named

and all that the astrologer has to do ever after is to assign a name to a previously unnamed object. 2003 UB313 is now established as Eris the largest dwarf planet. It was precisely to the minute on the western horizon at New York when the WTC first impact happened.

A slightly restricted list would look like this:

Record #	Epoch-yr	Primary Desig	Name	H
50000	2000	2002 LM60	Quaoar	2.73
90377	2003	2003 VB12	Sedna	1.58
90482	2001	2004 DW	Orcus	2.30
497195	2002	2003 EL61	[...unnamed...]	0.26
513244	2003	2003 UB313	Eris	-1.17
554319	2004	2005 FY9	[...unnamed...]	-0.30

The above bodies are the largest in the solar system. Pluto and Charon fall into this category. Some of them fall in the new category of the “dwarf planets” and some pertain to the class of “small solar system bodies”. Eris is larger than Pluto, and Charon may be treated as separate body. In the delineation we gave some credit to Charon while delineation it for special astrology lovers who find Charon in their 7th house by a split hair. The allusion to hair of course comes from Charon in Coma Berenices. At the time Pluto was a planet, Coma Berenices was one to partake of the zodiacal constellations. While works like “Pluto in Bootes and Coma Berenices” are still valid, the two constellations are no longer zodiacal since Pluto is now mere a dwarf planet.

Quaoar is currently waiting for the company of Pluto and Jupiter in Ophiuchus. While Pluto’s reentry into Ophiuchus is a touch and go, Jupiter approaches this large zodiacal constellation on its regular path to settle in for the year 2007.

Sedna is leaving Cetus for Taurus much as dwarf planet Pluto does on its routine inspection of the astrological skies. Pluto never enters Pisces or Aries but dips to rule in Cetus where we find Eris the major dwarf planet. Pluto and Eris can be closely conjunct in Cetus. Among the 24 zodiacal IAU constellations Cetus was our favorite in the year 2005 when we had the Moon, Mercury, Venus, Mars, Asbolus and Eris 2003 UB313 in Cetus with appropriate and more or less apocalyptic portents and events.

2005 FY9 and 2003 EL61 are in Coma Berenices. Orcus is in Hydra waiting for Venus there in summer 2007. Coma Berenices and Hydra were favorite star clusters with the Egyptians of which we shall hear more and more as our Egyptian astrology reintegration project progresses. We shall have to scratch, dig as well as meditate on Egyptian mantras and invocations to complete this opus. The author gives you a cryptic glance from Venice (Vinixia, Serenissima Republica) now in Italy and its rune lion haunted arsenal.
